## TARGA® PM10 HOLLOW FIBER CARTRIDGE

### CARTRIDGE STORAGE CONDITIONS:

New cartridges are impregnated with glycerin. Glycerin should be removed from new cartridges before initial use with a rinse followed by a caustic wash and then a caustic/chlorine wash. See pre-startup cleaning instruction sheet packed with each cartridge shipment.

New cartridges should be stored in their original shipping containers and crates until ready for installation, as follows:

- Indoors, out of direct sunlight.
- At temperatures between 50 – 85 °F (10 – 30 °C).
- At relative humidity below 70%.
- In a horizontal position.

Used cartridges should be cleaned, rinsed and impregnated before storage with one of the following solutions.

- Glycerin @ 80 – 100% (best)
- Phosphoric acid @ pH 2 – 3
- Benzoic acid or sodium benzoate @ 1,000 ppm
- Sodium bisulfite or sodium metabisulfite @ 1,000 – 5,000 ppm

Cartridges stored in sodium bisulfite or sodium metabisulfite should be flushed with clean water and impregnated with fresh solution at six-month intervals. Once impregnated the cartridges should be left on the system with all valves closed or removed from the system and sealed in plastic bags. Storage conditions described above for new cartridges should be used for storage of used cartridges. Cartridges must be drained, rinsed and cleaned after storage per the pre-startup cleaning instruction sheet packed with each cartridge shipment.
